

# GEOXYGENE – 3D MODULE v1.6

## INSTALLATION GUIDE

This document describes GeOxygene 3D (v1.6) executable installation (available since January the 23<sup>rd</sup> 2014, at following location : <http://oxygene-project.sourceforge.net>).

Download and unzip folder corresponding to the user operating system.

GeOxygene3D rendering relies on Java 3D library which must be downloaded from address below :

<https://java3d.java.net/binary-builds.html>

Please pay attention to download zip version matching with user operating system and processing unit type (for example : j3d-1\_5\_2-windows-i586.zip for Windows 32 bits...). Extract files from downloaded zip. Move following jar and dll files (usually located in *bin* and *bin\ext* folders) to GeOxygene 3D libraries folder (*exe\lib* from root).

- j3d-core-1.5.2.jar
- j3d-core-utils-1.5.2.jar
- vecmath-1.5.2.jar
- j3dcore-ogl.dll

Launch GeOxygene 3D module with *GeOxygene.bat* (GeOxygene 3D folder root).

For running GeOxygene 3D properly, user is advised to increase Java Virtual Machine heap space memory. To do so with Eclipse : Run → Run configurations → Arguments and use following commands in VM text field :

-Xmx<size>m replacing <size> by 128 or 512 (MB) for example.

Optional : in order to use GeOxygene 3D in full capabilities, TetGen tetraedrisation must be downloaded from following location :

<http://wias-berlin.de/software/tetgen/#Download>

Use C compiler to produce dll from source code and add it in same folder (*exe\lib*).
